FAN OUTLINE

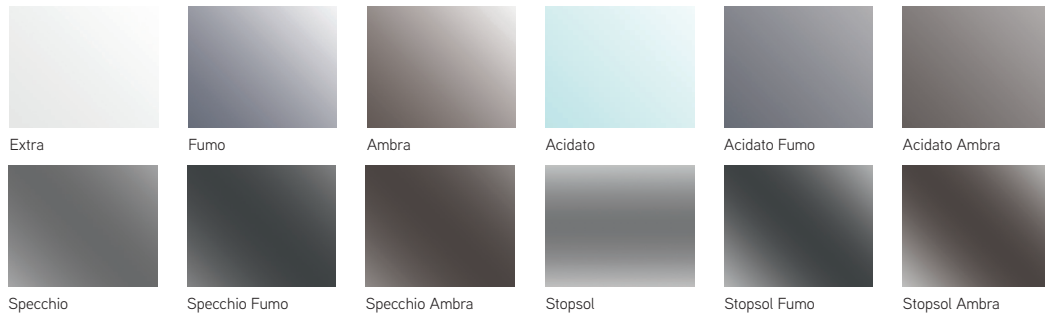

FAN SOLID

Con l'utilizzo di Fan si può finalmente dire addio ai limiti imposti dalle normali porte battenti. Grazie all'esclusivo sistema pivot, studiato per essere installato su porte fino a 250 kg, si possono chiudere ambienti utilizzando una sola anta, anche di grandi dimensioni. Il sistema è progettato per restituire un'apertura e una chiusura morbida e bilanciata, in base al peso e alla dimensione della porta, e comunque regolabile a proprio gusto. Inoltre tutto il sistema è integrato nell'anta, così che a pavimento e a soffitto andranno installate solo delle piastre in acciaio, senza dover realizzare opere invasive o preventive.

Thanks to Fan model you can finally say goodbye to the limits imposed by the normal swing doors. Thanks to the exclusive Pivot system, designed to be installed on doors up to 250 kg, you can close rooms using only one door, of enormous size, too. The system is designed to provide an opening and closing softly balanced, based on the weight and size of the door, and anyway adjustable to your taste. Moreover, all the system is integrated into the door, so that both on the floor and on the ceiling must be installed only steel plates, without having to make invasive or preventive works; the product is therefore compatible with the existing building situations without the need for reinforcements.
